Long Term entrance classes from 14 th July 1987**

Med/Engg entrance coaching  
is modernised with help of  
cyclostyled notes.

Sold Price ~~₹1000~~ **A cyclostyle Machine**

**Cyclostyled Notes**

$$\begin{aligned} & \dots 0 \leq m \leq n \\ & \dots 0 \leq \frac{m}{n} \leq 1 \\ & \dots 0 \leq P(A) \leq 1 \end{aligned}$$

When  $m = 0$ ,  $P(A) = 0$ . No outcome can result in the event A and the event A is impossible when  $m = n$ ,  $P(A) = 1$ . Here all the 'n' outcomes are favourable to A and the event A is certain to occur.

#### 34. A Posteriori (or Statistical) Probability:

Def: If an event A has occurred 'r' times in a series of 'n' independent trials, all made under essentially the same conditions, then the limit of ratio  $r/n$ , when the total number of trials 'n' increases indefinitely is called the probability of the event in a single trial.

In symbols  $P(A) = \lim_{n \rightarrow \infty} (r/n)$ , provided that the limit is finite and unique.

#### 35. Random Experiment:

Experiments having the following general features are known as random experiments.

- Each experiment is capable of being repeated indefinitely under essentially unchanged conditions.
- It must be possible to describe the set of all possible outcomes of the experiment.
- As the experiment is performed repeatedly, it must result in one of its different possibilities.

#### 36. Sample Point or Elementary Outcome:

The result of a single trial of a random experiment is called an Elementary Outcomes or Sample Point.

#### 37. Sample Space:

The totality of all sample points will be called the sample space of the random experiment. The sample space is denoted by S.

#### 38. Impossibility and Certainty:

The null set is a random event and is called an "Impossibility". The set 'S' is a random event and is called a "Certainty".

#### 39. Union:

The event which consists of all points that are in A or in B or in both, is called the union of A and B and is written as  $A \cup B$ .

#### 40. Intersection:

The event which consists of all points that are in both A and B is called the Intersection of A and B is written as  $A \cap B$ .

and

For a frequency distribution

$$M. D. = \frac{\sum f_1 / X_1 - N}{N}$$

Where A is some average of the corresponding distribution.

**27. Root Mean Square Deviation:**

The square root of the A.M. of the squares of deviations of observations taken from an average A is RMSD.

i.e: RMSD  $= \sqrt{\frac{\sum (x-A)^2}{n}}$

**28. The Standard Deviation:**

Standard Deviation  $= \sqrt{\frac{\sum f_1 (x_1 - \bar{x})^2}{N}}$

(If the origin is taken as the mean  $\bar{x}$ , the corresponding root mean square deviation is known as the standard deviation (S.D.) and is denoted by  $\sigma$ )

For a raw data, if  $X_1, X_2, \dots, X_n$  are the n observed values of a variate x and A is any arbitrary origin, then the root mean square deviation about A is defined as:

$$s = \sqrt{\frac{\sum (x_i - A)^2}{n}}$$

Square of S.D. is called the variance.

**29. Events:**

Any finite sub set of the sample space is called an event.

**30. Mutually Exclusive Events:**

Two or more events are said to be mutually exclusive if the occurrence of any one of them in a single experiment prevents the occurrence of all others in that experiment.

**31. Equally Likely Events:**

The total number of outcomes of an experiment are said to be equally likely if one of them cannot be expected in preference to the other.

**32. Exhaustive:**

Two events are said to be exhaustive if their union is the sample space.

**33. A priori (or Mathematical) Probability:**

Def: If out of the 'n' exhaustive, mutually exclusive and equally likely outcomes of an experiment, 'm' are favourable to the occurrence of an event A, then the probability of the event A is defined to be m/n. This is written in symbols as:

$$P(A) = \frac{m}{n}$$

Since the number of outcomes 'm' favourable to an event A cannot be greater than the total number of exhaustive outcomes 'n'.

**41. Complementation:**

The event which consists of all the points that are not in A is called the complement of A and is written as  $A'$ .

**42. Discrete Sample Space:**

Def: A sample space 'S' is called discrete if it contains either (i) a definite number of points, or (ii) countably infinite number of points which can be put into a one-to-one correspondence with the positive integers.

**43. Axiomatic Probability:**

Def: The non-negative real number P(A) for every event A in 'S' is called the probability of the event A, if it satisfies the following axioms:

- a)  $P(A) \geq 0$
- b)  $P(S) = 1$
- c)  $P(A \cup B) = P(A) + P(B)$  if A and B are disjoint or mutually exclusive.
- d)  $P(A \cap B) = P(A) \cdot P(B)$  if A and B are disjoint or mutually exclusive.

**44. Stochastic Independence:**

Def: Two events A and B are said to be stochastically independence if:

$$P(A/B) = P(A) \text{ and } P(B/A) = P(B)$$

**45. Multiplication Theorem for Three Independent Events:**

If 'A', 'B' and 'C' are three mutually independent events, then  $P(A \cap B \cap C) = P(A) \cdot P(B) \cdot P(C)$ .

**46. Addition Theorem for any two Events:**

If 'A' and 'B' are any two events in 'S', then:  $P(A \cup B) = P(A) + P(B) - P(A \cap B)$

**47. Theorem (Conditional Probability Theorem):**

For any two events 'A' and 'B'

$$P(A/B) = \frac{P(A \cap B)}{P(B)}$$

**48. 10 - 19, 20 - 29 are two consecutive classes of a f.d. To which class the observation 19.7 belongs:**
